CS 255 System Design Document Template

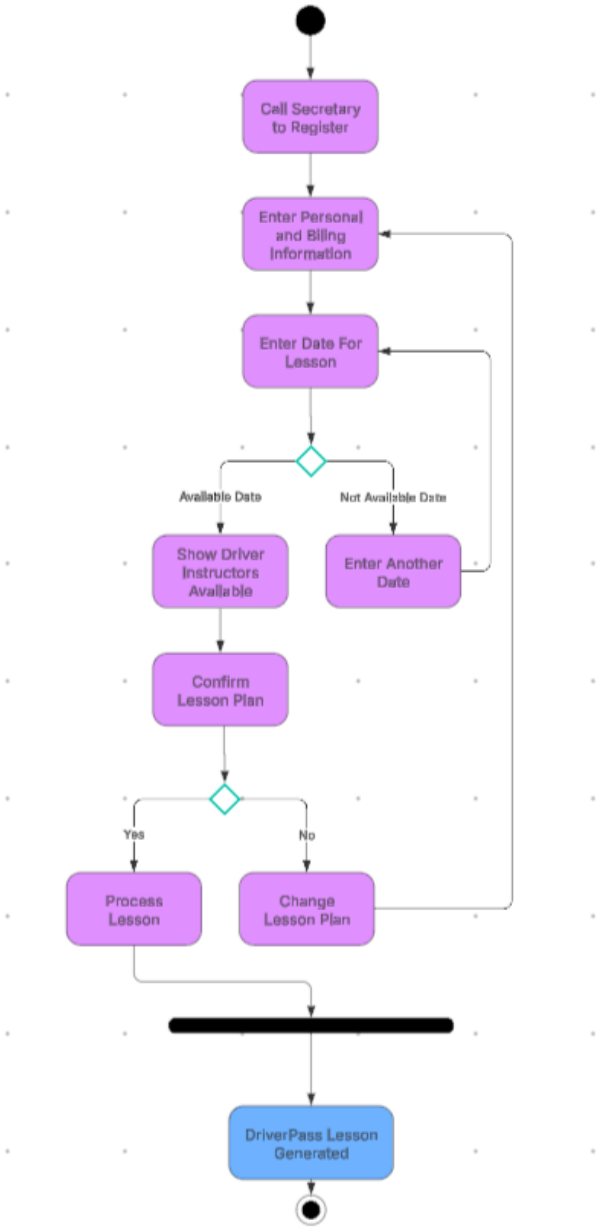

This template lays out all the different sections that you need to complete for Project Two. Each section has guidance to prompt your thinking. You will need to continually reference the interview transcript as you work to make sure that you are addressing your client's needs. There is no required length for the final document. Instead the goal is to complete each section based on what your client's needs are. Remove this note when you are finished, and replace all bracketed text with the relevant information.

Technical Requirements

First off according to the use case diagrams, the DMV's requirements should have DriverPass update their lessons and rules daily to meet with the DMV's compliance in synchronization. It will have to set a resource limit each day so as not to overload the hardware. Activity diagrams also show that the amount of data moving between the system could drastically change the performance. This can cause latency issues if not handled correctly. In fact, the Sequence diagram also acknowledges data from instructors and their role, which means we also receive hundreds of units of data from them as well.
